Summary

Software Engineer with full-stack development experience across React, Node.js, FastAPI, and MongoDB, along with strong fundamentals in data structures, compilers, and system design from coursework and independent projects. Currently building backend and AI-integrated systems at MLBench, with prior experience across front-end development, Salesforce administration, and applied machine learning.

Experience

AI Engineer Jun 2026 – Present
MLBench Pvt Ltd
- Built and evaluated a fine-tuned detection model pipeline for a document field extraction system, improving F1 score from 0.8568 to 0.8896 over the client's prior architecture.
- Built and maintained data pipelines for model training, including document annotation, OCR backend evaluation, and experiment logging.

Front-End Intern Jul 2025 – Aug 2025
Certura
- Built a responsive portfolio website using HTML, CSS, and JavaScript with animations and media query-based responsiveness.
- Developed a dynamic to-do list application and a weather dashboard using the OpenWeather API, with real-time data fetching and error handling.

Teaching Assistant – Software Engineering & Artificial Intelligence Aug 2025 – Jun 2026
Information Technology University
- Assisted in teaching core Software Engineering concepts including system design, version control, and testing methodologies.
- Mentored students on scalable software projects, conducted code reviews, and provided constructive feedback on code quality.

Salesforce Admin Intern Jun 2024 – Sep 2024
Incredibles
- Completed in-depth Salesforce Administrator training via Trailhead, building strong practical expertise through hands-on projects.
- Developed a solid understanding of core Salesforce features including data modeling, reporting, dashboards, flows, and foundational Apex concepts.

Projects

Legal AI Chatbot | *GitHub Link* July 2026
- Built a full-stack application using React, FastAPI, and MongoDB, with JWT-based authentication, persistent conversation memory, and real-time token streaming.
- Implemented project-scoped data isolation so uploads are processed and queried independently per client, with source-linked responses.

Airbnb Clone (Extended) | *GitHub Link* Oct 2024 – Dec 2024
- Developed a full-stack Airbnb-inspired web application using React, Node.js, and MongoDB, with JWT-based authentication, role-based access control, and protected admin routes.
- Built features for property listing, booking management, and host-specific CRUD operations.

C++ Compiler From Scratch | *GitHub Link* Sep 2025 – Dec 2025
- Built a toy C++ compiler from scratch, implementing lexical analysis, a recursive-descent parser, and semantic checks against a custom grammar specification.

Footfall Counter | *GitHub Link* June 2026
- Built a real-time people-counting pipeline optimized to run entirely on CPU, with configurable parameters for accuracy and speed trade-offs.

Technical Skills

Languages: C++, Python, Java, C, SQL, HTML, CSS, JS
Frameworks: React, Node.js, Express, FastAPI, Flask, MongoDB, NumPy, pandas
Tools: Git, VS Code, Jupyter, Linux, JWT Auth, RESTful APIs, PyTorch, scikit-learn
